## What is it User Story?

- User stories represent the stockholders requirement in shortly informative way.
- The User stories are written by or for users to influence the functionality of the system being developed and the consist of three parts:

  A. **Who** is for
  B. **What** is expects from the system
  C. **Why** it is important

User Story Quality:

A high-quality user story should meet the following principles:

- **Well-formed:** It is required to be formulated in high quality and must include actor and method

- **Atomic:** The user story should be an atomic unit and represent no more than one method!

- **Minimal:** The user story should be short and clear

- **Unambiguous**: It is important that it be unambiguous and not open to interpretation. Therefore, we prefer to use nouns.

- **Uniform:** All user stories will be formulated according to the basic structure

- **Independent:** We would like that each User Story stand on its own and not depend on other User stories

Examples

a. Get All Employees

User Story Card

As a Manager

I want to see all the users in the system

So that I can perform system operations on them

b. Get employee by ID

User Story Card

As a Manager

I want to Pull off an employee from the system

So that I can perform system operations
